

Acoustic acquisition and behavioural intervals across distance in dynamic motile-target simulations

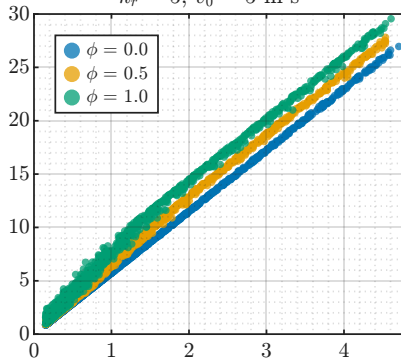

A. T_a : responsivity coefficient

$\phi = 0.5, v_0 = 5 \text{ m s}^{-1}$

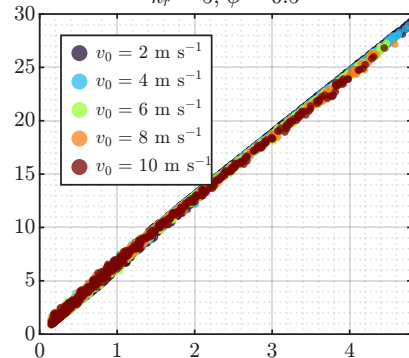

B. T_a : echo-window choice

$k_r = 5, v_0 = 5 \text{ m s}^{-1}$

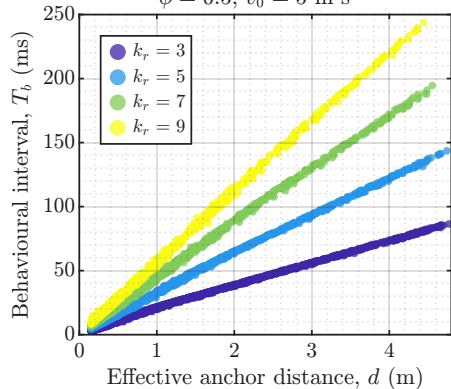

C. T_a : approach speed

$k_r = 5, \phi = 0.5$

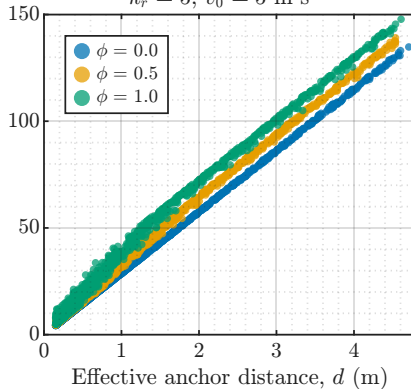

D. T_b : responsivity coefficient

$\phi = 0.5, v_0 = 5 \text{ m s}^{-1}$

E. T_b : echo-window choice

$k_r = 5, v_0 = 5 \text{ m s}^{-1}$

F. T_b : approach speed

$k_r = 5, \phi = 0.5$
